1  47% of Patients from Two Experienced UK Laparoscopic Colorectal Units Undergo a Totally Laparoscopic Resection- are the Proposed Target Rates too High and Potentially Dangerous? 

2  A Comparison of Laparoscopic versus Open Reversal of Hartmann’s Procedure 

3  A Placebo Controlled Trial of Per-operative Bupivacaine and peri-operative diclofenac in post operative pain control after laparoscopic cholecystectomy 

4  Laparoscopic repair of Morgagni hernia using falciform ligament 

5  An assessment of the impact of laparoscopic appendicectomy and the EWTD, on the training of junior surgeons 

6  Are we performing enough emergency laparoscopic cholecystectomy?  5 year experience from district general hospital in Scotland 

7  Bilo-enteric fistula (BEF) at laparoscopic cholecystectomy: Review of ten years experience 

8  Cadaveric Laparoscopic Training – The Future? 

9  Can the Laparoscopic Approach to Appendicectomy Become the Standard in the District General Hospital? 

10  Cholecystectomies during a 3 year period at Western Isles Hospital: Conversion Rates, Bile Swab cultures and Antibiotic profiles 

11  Chronic pain after laparoscopic groin hernia repair with a medium weight mesh 

12  Comparative review of litigation costs related to common bile duct injuries during laparoscopic cholecystectomy: The more westerly the more expensive 

13  Cystic duct stump leak: a preventable complication of laparoscopic cholecystectomy 

14  Diagnostic Laparoscopy in Men- Why Bother? 

15  Endoscopic Intervention Following Laparoscopic Biliary Surgery 

16  Factors influencing outcomes in laparoscopic total extra-peritoneal hernia repair 

17  Higher BMI and previous abdominal surgery do not affect the clinical outcome or the conversion rate in laparoscopic colorectal surgery 

18  Hospital readmissions within 3 months of a laparoscopic cholecystectomy 

19  Improved Surgical Outcomes After The Introduction Of A Laparoscopic Colorectal Service In The District General Hospital Setting 

20  Inguinal Hernia Mesh - Size, Form and Placement 

21  Introducing an integrated emergency management pathway for penetrating abdominal injuries 

22  Is Debunking of large exophytic rectal lesions? 

23  Laparoscopic adjustable gastric banding - A 'true day case' procedure 

24  Laparoscopic Anterior Resection For Primary Rectal Cancer – Beyond The Learning Curve 

25  Laparoscopic appendicectomy : impact of an elective/emergency split 

26  Laparoscopic assisted right hemicolecction - is it really better! 

27  Laparoscopic cholecystectomy (LC) with transcystic bile duct exploration (TCE)- The treatment of first choice for symptomatic or incidental common bile duct (CBD) stones 

28  Laparoscopic Cholecystectomy and Common Bile Duct stents
Laparoscopic Colectomy for the Treatment of Colorectal Cancer: A Three year follow up of oncological and surgical outcomes from a single institution

Laparoscopic Colorectal experience 3 years after appointment: 100 cases

Laparoscopic Colorectal Fellowship: A safe route to Independent Consultant Practice

Laparoscopic common bile duct (CBD) T-tube placement – a simple technique

Laparoscopic experience of Junior Surgical trainees in UK versus India

Laparoscopic Re-operation for splenunculus - facilitation by hookwire localisation

Laparoscopic repair of umbilical and paraumbilical has the lowest rate of recurrence

Laparoscopic Splenectomy in a district general hospital- reporting our learning curve

Laparoscopic splenectomy: is it safe for giant spleens?

Laparoscopic surgery is associated with reduced MRSA infection rates in elective major abdominal surgery

Laparoscopic Total Mesorectal Excision Following Long Course Chemoradiotherapy for Locally Advanced Rectal Cancer

Laparoscopic versus open appendicectomy: Audit of a junior registrar

Laparoscopic versus open incisional hernia repair - outcomes and cost analysis

Laparoscopic Versus Open Inguinal Hernia Repair. Outcomes in Patients Who Underwent both Procedures

Lymph node harvest from Laparoscopic Colorectal Surgery. One unit’s experience of 150 cancer cases

Management of Acute Gallbladder Disease and Results of Laparoscopic Cholecystectomy in Emergency Setting in a single admission

Management of the ‘Normal’ Appendix at Laparoscopy for Right Iliac Fossa Pain

Modular Training in laparoscopic colorectal surgery does not affect clinical outcomes or implementation of service within a busy district general hospital

Multivariate Analysis and Risk Prediction Model for Gastric Conduit Ischaemia following Minimally Invasive Oesophagectomy

Outcome of Laparoscopic Cholecystectomy in Patients with Sickle Cell Anaemia in a UK Centre

Outcomes of laparoscopic and open splenectomies over a five year period

Patient choice and laparoscopic surgery – should patient preference influence provision of services?

Patients and Surgeons views on Natural Orifice Translumenal Endoscopic Surgery (NOTES)

Port Site Hernias Following Laparoscopy

Preoperative Ultrasound assessment of clinically occult groin prior to Trans-abdominal pre-peritoneal repair (TAPP).

Primary Closure after Laparoscopic Choledochothom: A comparison of emergency and elective cases

Reusable, Recyclable laproscopic home trainer

Risk factors for open conversion of laparoscopic biliary procedures

Should we remove the 'normal looking' appendix?

Simulator based training for acquiring and advancing laparoscopic skills: validation study of the integrated simulator – i-Sim
Single port cholecystectomy
Single session laparoscopic management of common bile duct (CBD) stones- A safe and cost effective option
Standardised techniques translate to standardised outcomes
Symptomatic outcome and patient satisfaction after laparoscopic 180˚ anterior partial fundoplication in patients selected without routine manometry and pH testing.
The Impact Of Bowel Cancer Screening On Surgical Service Provision
The safety and efficacy of the same-day discharge after laparoscopic fundoplication: a prospective cohort study over a four-year period
The two-week target for laparoscopic cholecystectomy following acute pancreatitis is feasible and cost effective.
Transperitoneal laparoscopic decortication of simple renal cysts: an index operation for urological trainees
Transversus Abdominis Plane (TAP) block - A useful new technique for pain control in laparoscopic colorectal surgery?
Uptake of Laparoscopic Appendicectomy Versus Open Appendicectomy in A District General Hospital Setting
Who Should Deal With Biliary Emergencies?
